

Cremation & Incineration Equipment

HSC - ATC

HSC – High Speed Cremulator

The High Speed Cremulator is designed to satisfy the specific requirements of a modern day crematorium. Being PLC controlled the cremulator offers fully automatic operation in just three minutes, with all the metal being removed without manual intervention. It is a very clean design, enabling its location even in public areas of the crematory.

ATC - Ash Transfer Cabinet

The Ash Transfer Cabinet filters out all airborne substances (particulate), quickly and efficiently, offering a safe and very ergonomic design for its operation. High levels of filtration ensures the system complies with all regulations and standards, significantly contributing to a pleasant, safe and healthy working environment.

The combination of cremulator and ash transfer cabinet may be optionally connected to an existing system (Health & Safety legislation)

Combined with the optional Ash Transfer Cabinet, any directly released substances are removed directly to prevent inhalation (Health & Safety Directive). The Cremulator can also be connected to an existing system.

The Ash Transfer Cabinet works seamlessly together with our fully automated High Speed Cremulator.
